True. I just wanted to share that the ESD does not need to be a voluminous document.

I haven't re-read, but of course the ARARs would have to be updated to be consistent with EMDF FFS. And there may be more that needs to be corrected. We've all learned a bit since then.

I found the D3 version of DOE's document and Martha's comments, but this is not the redline/strike out sent by EPA to DOE's attorney.

I think Leif may have sent Kimberly Walling. It should be pointed out that this ESD is not for the Clinch River but Poplar Creek, which is no longer considered for disposal of CERCLA waste water.

I am providing this as a comparison of what DOE should be able to produce but focus on the Clinch.
